

Faculty: Clean Up Manual Enrollments

Hart Wilson - 2025-04-10 - Comments (0) - Faculty

Manual Enrollments in Moodle

Being able to [add individuals](#) to a course is a great convenience. Typically, we see manual enrollments of students falling into one of two groups: waitlisted students and students from more than one section enrolled in a jointly taught course. Keeping track of manual enrollments is important for institutional recordkeeping as well as ensuring that we don't have students arriving at the end of the term having completed the coursework without ever being formally enrolled.

Waitlisted Students

It's not unusual to add a learner to your course manually if they are waitlisted or need access to your course right away. You can remove those manual enrollments and help us track students who are manually entered — and don't realize they are not formally registered for a course. Here's how:

1. Go to your **Participants** page.
2. In the **Enrolled users** interface, select **Enrollment methods** from the **Select...** field in the **Match** options area.
3. From the enrollment method options listed, select **Manual enrollments**.
4. Click on **Apply filters**.
5. If any students are listed in the resulting report, check to see if there are two "Active enrollments" listed. If so, one will include a trash icon and the other will not. Click on the trash can of any multiple enrollments and confirm that you want to delete the enrollment. Any student you unenroll will fall off the report.

A word of caution: If there is significant lag time (like a week or more) between a student being manually enrolled and formally enrolling, it's possible that work submitted by the student during that interval will be lost. Don't panic! You can manually re-enroll them and back date their enrollment to the course start date by clicking on the **Show more....** link and that will restore any work they submitted.

The screenshot shows the 'Enrolled users' page in Moodle. At the top, the 'Participants' tab is selected (1). Below the 'Enroll users' button, the 'Enrollment methods' dropdown is highlighted (2). A search filter for 'Manual enrollments' is applied (3). The 'Apply filters' button is highlighted (4). The table below shows one participant found. The 'Status' column for the participant is highlighted (5).

First name / Last name	ID number	Roles	Groups	Last access to course	Status
[User Profile]		Student	Group D		Active

Co-enrolled Students

If you're teaching a course that combines multiple sections that were not cross-listed in the schedule, you don't have to manually enroll students in order to have them enrolled in one Moodle course shell. Instead, create a meta course link. Besides cleaning up our records, using a meta course link means you don't have to make sure that everyone gets enrolled — Moodle will handle it!

Open the menu on the upper left and choose the **Enrollment methods** view. Open the **Add method** menu and select **Course meta link**. Enter the course reference number in the field provided to bring up the section that you wish to enroll, select the course and click on **Add method**. See [these instructions for combining sections](#) for additional details.
