

How to Clear Malware from Google Chrome

David Raco - 2025-06-16 - Comments (0) - Web browsers

This article deals with the issue of getting **malware** through your **Chrome** browser and how to handle that.

There are some complexities to account for if getting malware through **Google Chrome**, such as hitching a ride on the **sync data** and becoming more difficult to remove with **anti-virus** programs. **Google** has an article here that goes over **how to address this issue** which you [can read here](#).

Warning

Resetting **sync data** *will remove* your **bookmarks**. Here is an article on how to [back up your Google Chrome bookmarks](#).

Warning

If you suspect your Chrome browser has been infected by malware, email infosec@sou.edu immediately!

Browser malware can steal credentials, session cookies, and other sensitive information that can lead to major data breaches. An infected browser is a potentially serious security incident that must be reported promptly.
