

How to Find Your Computer's Hostname

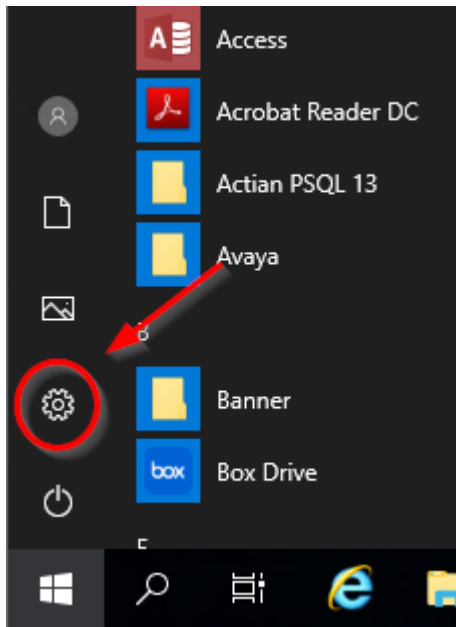

David Raco - 2021-02-16 - Comments (0) - Mac

This article will show you how to find your computer's hostname.

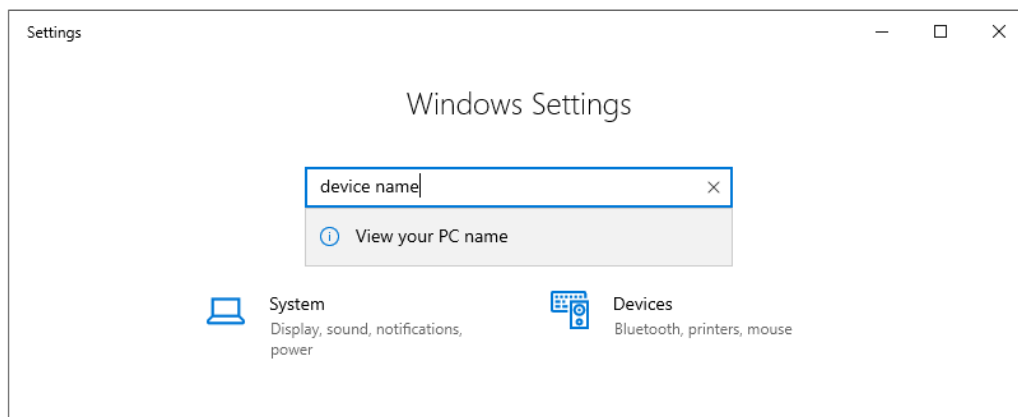

Windows

Method 1: Using Windows Settings

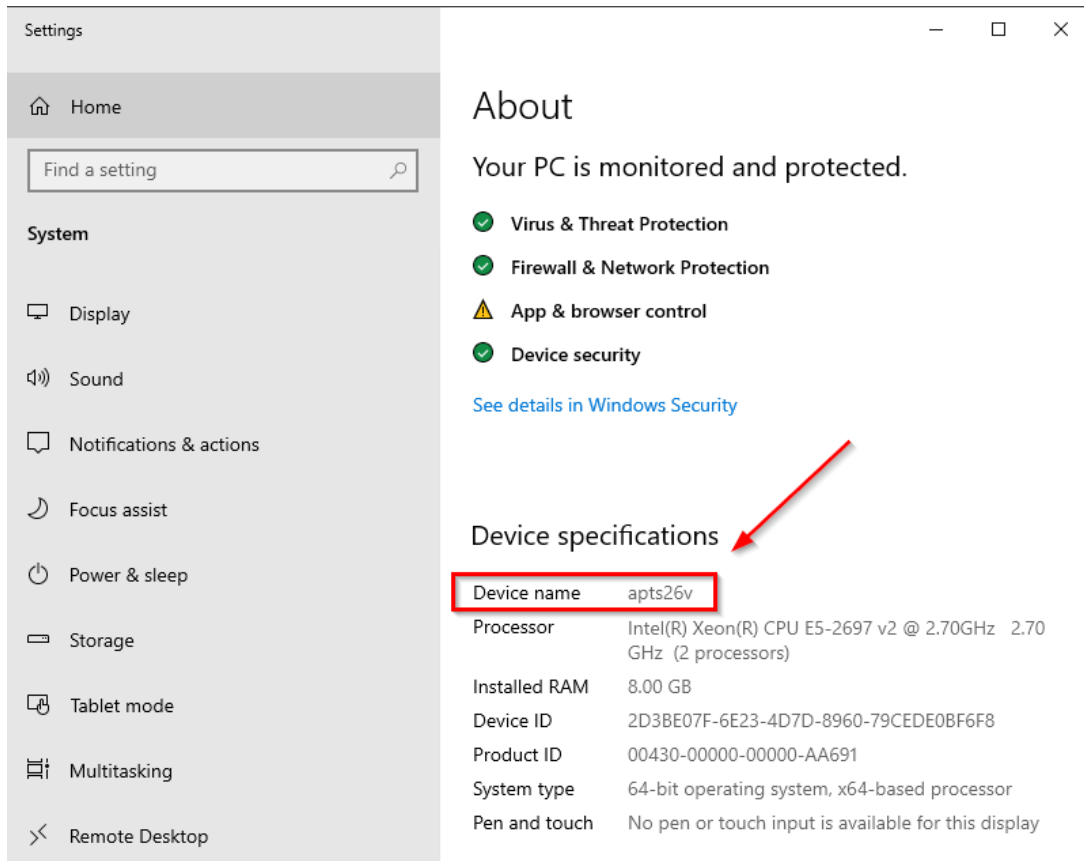

Open up Windows Settings from the Start Menu by clicking on the gear icon.

In the search field, type in "device name" and then click on the dropdown option for View your PC name. Alternatively, you can click on the System icon from this screen and then click on the About item in the left-hand navigation menu.

Your computer's hostname is the "Device name" on the About screen. Please make a note of it.

Method 2: Using the Command Prompt

This method assumes that you are already familiar with using the command prompt on Windows. Use the other method if not.

Simply bring up a command prompt and execute the command "hostname."

```
C:\Windows\system32\cmd.exe
Microsoft Windows [Version 10.0.17763.1757]
(c) 2018 Microsoft Corporation. All rights reserved.

C:\Users\racoadmin>hostname
apts26v

C:\Users\racoadmin>_
```

Macintosh

Follow [Apple's recommended instructions for locating your computer's hostname.](#)
