How to Manage Multiple Screens on Macintosh and Windows

David Raco - 2017-09-02 - Comments (0) - Mac

This article covers how to manage multiple screens on Macintosh and Windows.

Windows

On Windows, you can use the keyboard shortcut (Windows Key + P) to bring up the display picker that gives you the option to select one of the following display modes:

Computer/PC screen only - The second screen is ignored and only the PC's primary display is used.

Duplicate - The second screen mirrors the primary display.

Extend - The PC display is extended across all screens.

Projector/Second screen only - The main PC display will be disabled and only the secondary screen is used.

Below are screenshots of what the display picker looks like on Windows 7 and Windows 10.

Windows 7

Windows 10

Macintosh

On Macintosh, you can use the keyboard shortcut **Command + F1**, depicted below, to mirror your displays. To configure more advanced multiple-display options, consult this [Apple support article](#).
