

## Identifying your telephone

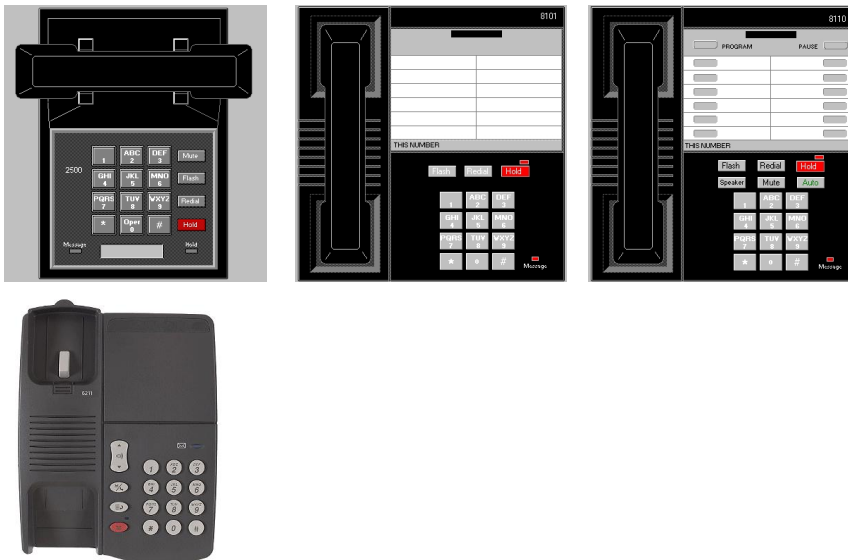

Michael Wagner - 2023-04-10 - Comments (0) - Telephone

Southern Oregon University provides and supports several types of phones. These phones come in three different groups: analog phones, digital phones, and Voice-Over IP (data) phones. Each of these groups of phones have different ways of communicating to the outside world, as well as different features and functionality, and therefore it becomes important be able to recognize your phone type.

Below is a list of the most common phone types on campus. **Click on the appropriate phone** for a detailed set of operational instructions.

### Analog Phones

Standard analog phones are basic phones similar to phones one might use at home. These phones only provide a single phone line and may or may not provide speed-dial buttons on the phone. These phones **do not have a screen** on them to provide Caller ID information. However, these phone do support (once enabled by I.T.) Caller ID boxes. Most cordless phones and independently purchased phones (unless otherwise indicated) are standard analog phones, but may not be supported by the IT department.

### Digital Phones

Digital phones provide **multiple phone lines** and provide speed-dial buttons on the phone. These phones **have a screen** on them to provide Caller ID information. This Caller ID screen **will not store** Caller ID information, it simply displays the information for the
