Recommended Anti-Virus for Macintosh

Brad Christ - 2025-05-07 - Comments (0) - Mac

For students and home users, we can recommend three free products for your Mac:

Sophos Home Edition

ClamXav

Malwarebytes for Mac

And an additional set of instructions for removing the Flashmall/Crossrider trojan.

It is no longer the case that Macs do not get viruses or malware. We strongly recommend that you install and use an anti-virus solution for your Mac.
