

Banner - Java issues? Use Banner Browser.

2013-03-11 - Julie McClendon - Comments (0) - General

There is currently some issues with Banner wanting to update the Java version. If you are having these issues your Computing Coordinator will need to uninstall and re-install the current version of Java.

In the meantime, under the Start Menu, use Banner Browser to access Banner. The other option is to use Remote Desktop. Please call the helpdesk if you need assistance.
