

MySOU and Internet 9 and 10

2013-07-10 - Lisa Denney - Comments (0) - General

On Tuesday, July 9, Microsoft released a critical patch for Internet Explorer 9 and 10 on Windows 7 that causes MySOU not to work correctly. We are working with the MySOU software vendor to find a solution. This patch will be installed automatically if you have Windows Updates enabled on your personal computer. We have stopped deployment of this patch to SOU computers.

In the meantime, you may use Chrome, Firefox, or Safari to access MySOU.

You may also access our key software systems (i.e. Banner, Moodle, Cognos) from <http://www.sou.edu/anywhere>. This site will work correctly in Internet Explorer 9 and 10.
